

What's New in This Edition

Dege poured extensive effort into making this guide more reliable, accessible, and inspiring. Here's a summary of the key improvements:

1. **Comprehensive Rule Audit:** Every rule in the guide has undergone a thorough review—examined, tested, and verified for functionality. These are now production-ready for integration into your JSON scripts.
2. **Enhanced Examples with Detailed Comments:** Nearly all examples have been overhauled to include line-by-line annotations, explaining the purpose and mechanics of each JSON element for easier learning and implementation.
3. **Full Testing Coverage:** Each rule has been loaded into active scripts and rigorously tested to confirm accuracy and performance.
4. **Visual Change Indicators:** Corrections to scripts—such as syntax fixes or ability name updates—are highlighted in **blue** for quick identification and reference.
5. **Revolution Rules Integration:** All Revolution Rules are now included, backed by over 40 hours of dedicated testing conducted in the final week before release.
6. **AI-Powered Validation:** Four advanced AI engines were employed to cross-verify the accuracy, playability, and balance of rewritten rules, ensuring a high standard of quality.
7. **Expanded Section 10 – Abilities:** This section now features dual lookup lists—one sorted by ability name and another by card name—for faster navigation and reference.
8. **Deep Dive in Section 15 – Cards:** We've loaded and evaluated every conceivable card, assessing its functionality, visual rendering (e.g., "paints" correctly), aesthetics, potential issues (broken or suboptimal), and overall viability. Discover hidden gems or troubleshoot edge cases you might not have encountered before.
9. **Updated Color Icons:** Two new color icons have been incorporated and applied across relevant rules, optimizing for skirmish and multiplayer scenarios.
